***Allowable Subject Matter***

1. Claims 5-13, 16-23, 26-27, 29-33 are allowed.

***Reasons for Allowance***

2. The following is an examiner's statement of reasons for allowance:

The prior art taken singly or in combination does not teach or suggest, a system to align digital image data among other things, comprising:

a compare circuit to generate a match bit; a register circuit to generate a leading edge signal; a counter circuit to generate a write pointer; a latch circuit to generate a leading edge pointer by latching the write pointer; a multiplexer circuit to receive parallel data stored in the plurality of FIFO latches and output aligned parallel data to a corresponding parallel data channel responsive to a corresponding read pointer (claims 5, 20);

each alignment detection block comprises a read pointer generating circuit to receive a corresponding leading edge pointer and generating the corresponding read pointer responsive to a reload read pointer signal (claim 16);

comparing the code for the previous with the code for the present word of data (claim 29).

The closest prior art, Lau et al. (U.S. Patent No. 6,578,092) teaches a method of receiving data transmitted from serial data channel, and converting to parallel data, and aligning data.

However, reference Lau et al. does not teach the above-mentioned limitations.

Art Unit: 2676

***Conclusion***

3. Any comments considered necessary by applicant must be submitted no later than the payment of the issue fee and, to avoid processing delays, should preferably accompany the issue fee. Such submissions should be clearly labeled "Comments on Statement of Reasons for Allowance."
